

Hospital Management System

Program Creation Idea

Name: Priyangan Vasantharajan

STUDENT_ID : 25197298

Python Class Overview

1.Introduction about my HMS:

This is a software which is used to manage doctors, patients, appointment details through the Internet. It helps to reduce manual works in the hospital management department. Moreover, we can save and use the hospital related data easily in the daily purposes.

2.Problem & solution with our creation:

Manual records and processing are very slow and not secure and also more spaces need to be saved the data that's why this software helps to improve features and reduce those problems.

Persons who are working in the hospital management system and other patients also can track easily and connect quickly with hospital. Hopefully, this is the most important for hospital development.

3.Special / Key Features:

We can manage

- ✓ Add_patient
- ✓ View_patient
- ✓ Add_doctor
- ✓ View_doctor
- ✓ Book_appointment
- ✓ cancel_appointment
- ✓ view_all_details

4.Program Design

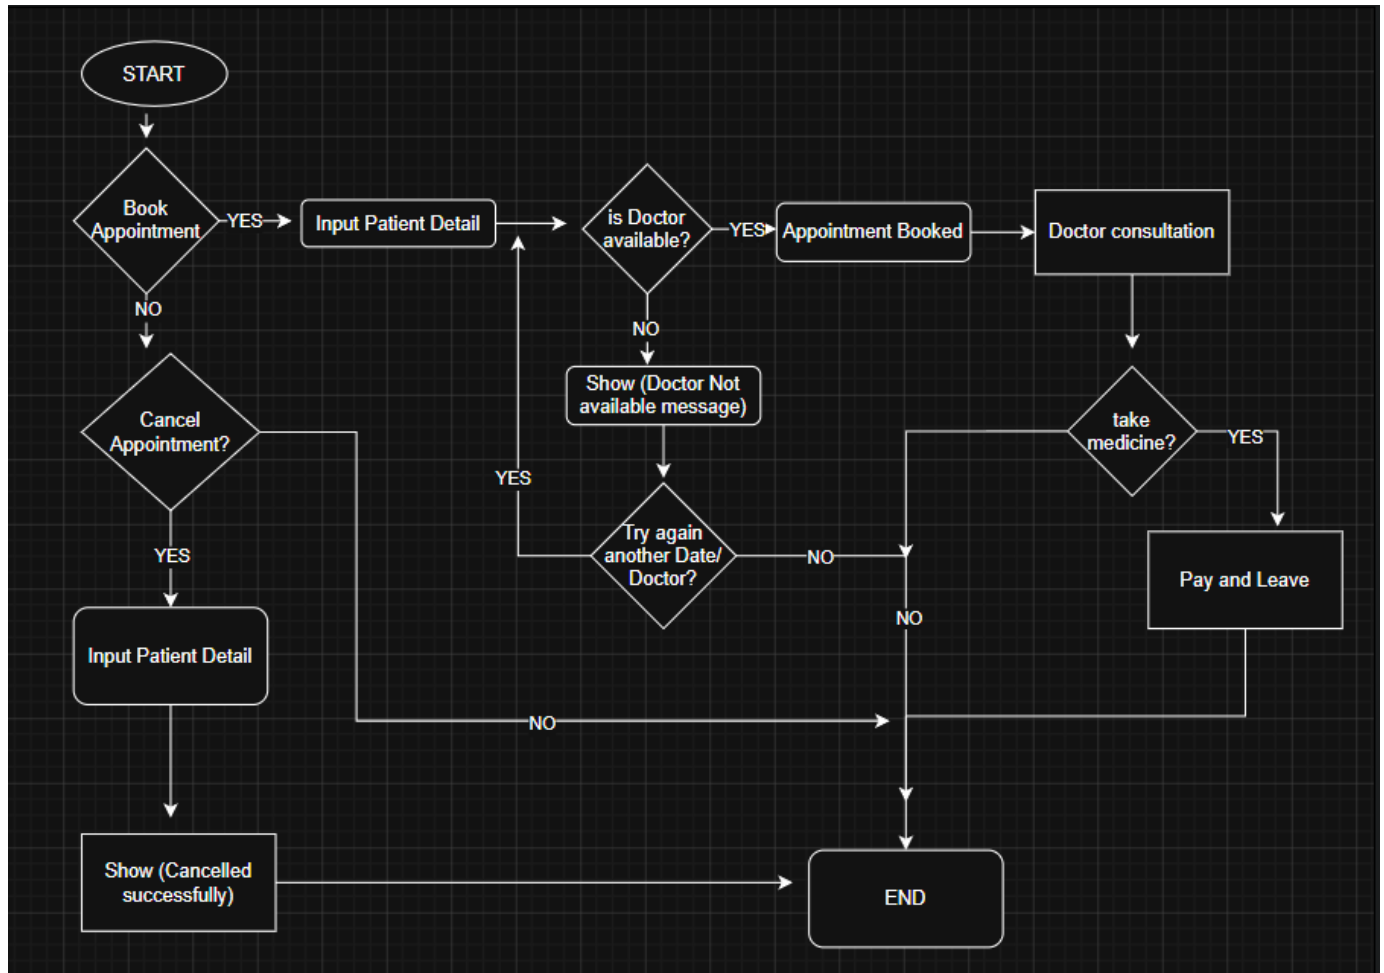

- ✓ Input user's data
- ✓ Data processed by the program
- ✓ Data save
- ✓ Output Information

5.Used Data Structures in this Software (Python)

- 1.Functions**
- 2.Multiple Files**
- 3.Dictionary / List**
- 4.Import Methode**
- 5.main()**
- 6.File Handling**
- 7.Error Exception**

6.Test Case's Examples:

7. Program's Flow chart
